

## PRESS RELEASE

### **PCA Announces Performance Plus™**

Performance Consulting Associates (PCA) of Duluth, GA., today announced the availability of its proprietary best practices methodology called Performance Plus™ for Oracle Corporation's line of asset management software.

Performance Plus™ is a preconfigured, predefined implementation methodology that uses proven best practice techniques to help companies maximize equipment availability and reliability thus reducing maintenance costs.

Performance Plus™ provides a unique and fully integrated out-of-the-box solution to the key issues surrounding EAM rollouts for value-conscious companies; this methodology reduces the length of time required to “go-live” and the high cost of training the user-base.

The Performance Plus™ value proposition includes:

- ✚ Quicker time to implement and less demanding of staff time than the traditional “as is” / “to be” configuration approaches;
- ✚ Preconfigured with business rules, work flows, code tables, reports, and KPI's which match best practices in asset care and reliability;
- ✚ Easier to learn because training is exactly matched to specific end-user roles and responsibilities;
- ✚ Fully supported by PCA's proven change management methodology
- ✚ A faster, more dependable pathway to realizing ROI.

The Performance Plus™ EAM methodology is available to all Oracle customers, regardless of whether their software environment includes JD Edward's *EnterpriseOne*, PeopleSoft *Enterprise*, or Oracle *eAM*. PCA and Oracle have teamed-up to develop a comprehensive EAM/Best Practices solution which is implemented in a highly participative environment, increasing the level of acceptance and utilization by users.

Additionally, PCA has developed different industry-specific models and templates, thus tailoring this combination of methodology and software solution to a wide spectrum of vertical markets.
